

SUSHIL CHHETRI

Senior Android Developer

SushilChhetri060@gmail.com | [linkedin.com/in/sushil-chhetri-79b58b163](https://www.linkedin.com/in/sushil-chhetri-79b58b163) | github.com/sushilchhetri/Android-Portfolio

PROFESSIONAL SUMMARY

Senior Android Developer with 5+ years of experience building scalable, production-grade Android applications using Kotlin, Java, Jetpack Compose, MVVM, and Clean Architecture. Experienced in performance optimization, BLE/device communication, REST APIs, offline-first architecture, and modern Android development. Reduced crash and ANR issues by ~30% through memory profiling, threading fixes, and lifecycle optimization.

WORK EXPERIENCE

Codknox Software Solutions Pvt. Ltd. — Sr. Android Developer Jul 2026 – Present | Mohali, India

- **Revamped GIGGO Partner app** from Java to Kotlin + Jetpack Compose within **1 month**, modernizing the entire UI architecture — app has 10K+ downloads on Google Play Store.
- Building and maintaining consumer-facing Android applications using Kotlin, Jetpack Compose, and MVVM Clean Architecture.
- Collaborating with cross-functional teams to deliver high-quality features, conducting code reviews, and maintaining coding standards.

Glocify Technologies Pvt. Ltd. — Android Developer Dec 2021 – Jan 2026 | Chandigarh, India

- Designed and architected scalable Android features for consumer-facing applications serving high daily active users within a cross-functional team of **2–5 engineers**.
- **Reduced crash rate and ANR issues by ~30%** through memory profiling, threading fixes, and lifecycle optimization — significantly improving app store ratings.
- Built offline-first architecture using WorkManager, Room, and REST APIs, improving reliability in low-connectivity environments.
- Implemented MVVM + Clean Architecture with Hilt dependency injection, improving code reusability, testability, and feature delivery speed.
- Performed performance profiling and UI rendering optimization using Android Studio tools, reducing frame drops and improving app responsiveness.
- Revamped an existing Android app with Jetpack Compose, enhancing user experience and increasing candidate engagement.
- Collaborated in informal Agile workflow including sprint planning, code reviews, and Git-based version control.

Lynhill Software — Junior Android Developer Nov 2020 – Nov 2021 | Mohali, Punjab

- Delivered 3 end-to-end Android applications from scratch, independently managing UI design, business logic, and API integration.
- Refined UI/UX designs using XML layouts to improve app flow and user satisfaction scores.
- Collaborated with QA testers to identify, debug, and resolve issues, consistently improving code quality and reducing bug backlog.

KEY PROJECTS

GIGGO Partner — Driver/Partner App | [Google Play Store](#)

- **Revamped the entire app from Java to Kotlin + Jetpack Compose** within 1 month, achieving full UI modernization with 10K+ active downloads.
- Implemented MVVM Clean Architecture ensuring clear separation of concerns, improved testability and long-term maintainability.
- Delivered performance improvements post-migration including faster load times and reduced memory usage.

TempleBliss — B2C Audio/Video Chat App

- Built real-time audio/video calling features using Twilio Video SDK, REST APIs, and Kotlin Coroutines, ensuring smooth call connectivity and lifecycle handling.
- Developed scalable MVVM + SOLID architecture with clear separation of concerns, enabling high testability and maintainability.
- Optimized network state handling, background execution, and UI performance to improve call stability and user experience.

Roya Medical — Health Tracking App

- Developed ML-based face measurement feature using Google ML Kit (Face Mesh) and integrated BLE device communication for real-time health data tracking.
- Implemented offline-first architecture with background sync using WorkManager, Room, and REST APIs.
- Applied SOLID principles (Dependency Inversion) to enable unit testing with mocked health data using JUnit and Mockito.

Vult — Private Cloud Storage App

- Built secure file storage and sharing with encrypted data handling and REST API integration, ensuring data privacy and seamless upload/download flows.
- Optimized background upload performance for low-connectivity scenarios, improving user experience significantly.
- Implemented chunked file upload strategy with retry logic to handle interrupted network connections gracefully.

TECHNICAL SKILLS

Languages: Kotlin, Java

Architecture: MVVM, Clean Architecture, SOLID Principles

UI: Jetpack Compose, XML Layouts

Concurrency: Kotlin Coroutines, Flow, RxJava

Dependency Injection: Hilt, Dagger

Networking: Retrofit, REST APIs

Local Storage: Room, SQLite

Connectivity: Bluetooth Low Energy (BLE), Bluetooth GATT, Device Communication

AI/Computer Vision: Google ML Kit, MediaPipe, OpenCV, CameraX

Performance: ANR Analysis, Memory Leak Detection, Profiling, ProGuard/R8

Testing: JUnit, Mockito

Tools & DevOps: Git, GitHub Actions (CI/CD), Firebase, Jira, Gradle

Methodologies: Agile, Code Review, Play Store Deployment

EDUCATION

Master of Computer Application (MCA) Chandigarh University, Mohali — Distance Learning — 2025

Bachelor of Computer Application (BCA) Sri Guru Gobind Singh College, Chandigarh — 2019

CERTIFICATIONS

Introduction to Programming Using Java — HackerRank
